## **Comtech Telecommunications Corp. Awarded Contract of Approximately \$4.6 Million for High Power Amplifiers**

MELVILLE, N.Y., Oct 19, 2004 (BUSINESS WIRE) -- Comtech Telecommunications Corp. (Nasdaq:CMTL) announced today that its New York-based subsidiary, Comtech PST Corp., has been awarded a contract for approximately \$4.6 million from Raytheon for the production of the Integrated Radio Frequency Assembly (IRA) used in the Enhanced Position Location Reporting System (EPLRS) UHF radio. Deliveries of these Integrated Radio Frequency Assemblies are expected to begin in February 2005 and be completed by July 2005.

The EPLRS radio provides a robust, on-the-move, high-speed, automated data exchange using a contention-free networking architecture. This guarantees speed of service to time critical users. The far-reaching capabilities of the EPLRS radio apply to a wide variety of defense mission areas. Effective air defense demands the timely distribution of command and control, situational awareness information and exchange of air and ground track data. EPLRS is the reliable communication system selected by the Department of Defense to meet those demands. EPLRS also fulfills the requirements for collecting data from widely dispersed systems in the forward battle areas, and sending the information back to the combat force. The EPLRS radio network is a reliable system that automatically reconfigures itself to overcome the line-of-sight limitations of UHF communications, as well as jamming threats.

Fred Kornberg, President and Chief Executive Officer of Comtech Telecommunications Corp., said, "This is a significant follow-on order for Comtech PST since it affirms Raytheon's confidence in Comtech as an integrated RF assembly manufacturer. This IRA assembly includes the high-power RF Amplifier as well as the UHF Radio Frequency Assembly integrated into a single module."

Comtech PST Corp. ([www.comtechpst.com](http://www.comtechpst.com)) is a leading independent supplier of broadband, high-power, high performance RF microwave amplifiers for use in a broad spectrum of applications including high-power instrumentation, defense, medical, and satellite communications systems.

Comtech Telecommunications Corp. designs, develops, produces and markets innovative products, systems and services for advanced communications solutions. The Company conducts its business through three complementary segments: telecommunications transmission, mobile data communications and RF microwave amplifiers. The Company offers niche products, systems and services where it believes it has technological, engineering, systems design or other expertise that differentiate its product offerings.

Certain information in this press release contains statements that are forward-looking in nature and involve certain significant risks and uncertainties. Actual results could differ materially from such forward-looking information. The Company's Securities and Exchange Commission filings identify many such risks and uncertainties. Any forward-looking information in this press release is qualified in its entirety by the risks and uncertainties described in such Securities and Exchange Commission filings.
