## **Comtech Telecommunications Corp. Received \$6.4 Million Contract Extension for the U.S. Navy's Advanced Time Division Multiple Access Interface Processor Terminals**

MELVILLE, N.Y.--(BUSINESS WIRE)-- February 24, 2015 - Comtech Telecommunications Corp. (NASDAQ:CMTL) announced today that during its third quarter of fiscal 2015, its Tempe, Arizona-based subsidiary, Comtech EF Data Corp., received a \$6.4 million contract award extension for the implementation of an Adaptive Coding capability for Advanced Time Division Multiple Access (TDMA) Interface Processor (ATIP) terminals from the Space and Naval Warfare Systems Command (SPAWAR). The ATIP is a Layer-2 Ethernet bridging device installed on ship, shore and submarine platforms in the Navy Multiband Terminal (NMT).

This award provides Adaptive Coding capability to the terminals, which was a planned performance improvement requirement under the existing ATIP contract awarded to Comtech EF Data in April 2013. The initial ATIP program awarded to Comtech EF Data is providing significant improvements to the AEHF system's performance through dynamic bandwidth management, support for higher XRD data rates, and increased throughput capacity. The addition of the Adaptive Coding capability will provide additional performance improvements by dynamically adapting to rapid changes in the physical environment to optimize the system's overall capacity and throughput in those conditions. This will allow the system to take advantage of unused system capacity and throughput under non-challenged environments.

"This award was made possible by our successful completion of the initial ATIP development effort which is now under contract for its first year of production," commented Dr. Stanton Sloane, President and Chief Executive Officer of Comtech Telecommunications Corp. "We are proud to continue to support and enhance the capabilities of the Navy's communications system."

Comtech EF Data Corp. is the recognized global leader in satellite bandwidth efficiency and link optimization. The advanced communication solutions encompass the Advanced VSAT Solutions, Modems, RAN & WAN Optimization, Network & Bandwidth Management and RF products. The Company is recognized as a technology innovator, and has a reputation for exceptional product quality and reliability. The solutions enable commercial and government users to reduce OPEX/CAPEX and to increase throughput for fixed and mobile/transportable satellite-based applications. For more information, visit [www.comtechedata.com](http://www.comtechedata.com).

Comtech Telecommunications Corp. designs, develops, produces and markets innovative products, systems and services for advanced communications solutions. The Company believes many of its solutions play a vital role in providing or enhancing communication capabilities when terrestrial communications infrastructure is unavailable, inefficient or too expensive. The Company conducts business through three complementary segments: telecommunications transmission, RF microwave amplifiers and mobile data communications. The Company sells products to a diverse customer base in the global commercial and government communications markets. The Company believes it is a leader in most of the market segments that it serves.

Certain information in this press release contains statements that are forward-looking in nature and involve certain significant risks and uncertainties. Actual results could differ materially from such forward-looking information. The Company's Securities and Exchange Commission filings identify many such risks and uncertainties. Any forward-looking information in this press release is qualified in its entirety by the risks and uncertainties described in such Securities and Exchange Commission filings.
